

## SOFTWARE RELEASE NOTES

Version 4.0.1R (16/05/2018)

### Bugs Resolved

- 1 Optimization in AIS targets drawing and limiting maximum amount of active targets to 100
- 2 Added a pop up message to inform a user that it is impossible to locate an empty track on map
- 3 Fixed displaying of the chart version on "Device Info" page
- 4 Fixed problem with user data visibility in Course Up and Route Up mode.
- 5 Fixed map redrawing after moving the cursor
- 6 Fixed editing of Mark position from a contextual menu on Map page
- 7 Added separate setting named 'Chart Lock' in "Map Settings" > "Objects on Map" > General Objects > "General Objects" that allows user to control this setting. If Chart Lock is on, then chart will automatically change zoom range to cartographic level with more details.
- 8 Default settings for LMCS chart was changed
- 9 Improved back to fix feature after timeout
- 10 Improvement in performance with big amount of marks on Mark's page and map
- 11 Added warning popup in case if Easy Routing returns same waypoints as were in input.

### Improvements

- 1 Added the description of COG and SOG Damping
- 2 Added drawing line from track's end to fix position.
- 3 Added possibility to change position of cursor window and scale bar in case if cursor is near the bottom left corner.
- 4 Added setting for Target Lost Timeout (in AIS > Settings)
- 5 Added possibility to change time zones with 30 min interval
- 6 Added a possibility to enable the corrections of ship's latitude and longitude ("General Settings" > "Navigation")
- 7 Improved UI for databoxes
- 8 Added white colour to map safe depth palette settings for 4D.
9. A-B: add setting to show only the line segment A-B or the extended EBL and VRM circle
